

Monash Bioethics Review

Australia's oldest peer reviewed bioethics journal is now online!

Monash Bioethics Review (MBeR) is produced by the Centre for Human Bioethics at Monash University, and from 2009 is published online by Monash University ePress.

The Monash Centre for Human Bioethics was established in 1980. The broad aims of the Centre are:

- to carry out research on issues in bioethics and to promote the study of the ethical, social and legal problems arising out of medical and biomedical research
- to provide an advisory and resource centre for government, professional, educational and community groups
- to stimulate the development of education programs in human bioethics for professionals and the public.

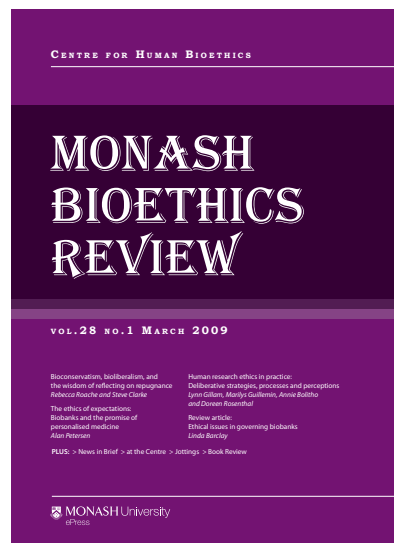

MBeR was first published in 1981 to communicate research findings and to publicise activities of the Centre. Each issue of *MBeR* contains several original articles by leading commentators on bioethics. Also included is an Ethics Committee Supplement, featuring original articles and news items on issues of particular interest to members of human research ethics committees. In addition, there are book reviews, news on scientific and legal developments relevant to bioethics, and an occasional Ethics Committee Reflection. Symposia on current bioethical issues are also a regular feature of the journal.

Publication Dates:

From 2009, *Monash Bioethics Review* is published both online and in print four times a year. Online plus print or online-only subscriptions are available from Monash University ePress.

Print ISSN: 1321-2753

Online ISSN: 1836-6716

Monash Bioethics Review

Editors

Linda Barclay teaches at the Centre for Human Bioethics at Monash University. Her main research areas are in contemporary political philosophy and bioethics, particularly focused on distributive justice, the ethics of markets, and equality. Dr Barclay was previously lecturer in moral and political philosophy at the University of Aarhus, Denmark.

Justin Oakley is the Director, Centre for Human Bioethics at Monash University. Associate Professor Oakley has published many books and scholarly journal articles, and his main research interests are in the areas of ethical theory and professional roles, ethical issues in patient care, ethics of clinical trials, surrogacy, virtue ethics and its applications, and the connection between moral psychology and ethical theory.
